## Welcome to the Women's Center at Marshall Medical Center South!

Like all employees at Marshall Medical Centers, we are committed to providing the best possible healthcare for our patients. In caring for families and their new babies, there are special steps to be taken to ensure their health and safety. As a guest, we need your help.

Please familiarize yourself with the Visitation Guidelines below. These guidelines are in place so that we may offer families the peace of mind that their babies are safe while in our care, and that every precaution is taken to limit a new baby's exposure to potential sources of infection.

*Thank you – and enjoy your visit with the newest addition to your life!*

### Visitation Guidelines for the Women's Center

We have taken these steps to provide mother and infant security.

#### Security and Building Access

The lower level lobby doors will be locked from 6:00 p.m. until 6:00 a.m.

There is "buzz in" access at the drop off entrance on the west side and east parking lot side of the building. Contact can be made with Women's Center personnel by pushing the gray button at these entrances.

Access to the patient rooms will be facilitated by Women's Center personnel. There is a "buzzer" at the point of entry, which will allow communication with employees when the desk is unattended.

### Infection Control

We strive to provide patient care that promotes a healthy environment for mothers and babies.

Two visitors will be allowed to stay with a mother during labor, and after delivery the visitors will be asked to remain in the patient room or wait in the lobby.

Children under 12 years of age will be permitted to visit ONLY if they are siblings of the newborn.

Hand washing with soap and water or with the waterless foam provided is encouraged by all visitors who enter the patient rooms.
