

Sleep Technologist Training Program

Start a fast-track career path in a high-demand field.

Marshall Sleep Medicine Academy's A-STEP training program is a great start for a professional career.

The Accredited Sleep Technologist Education Program (A-STEP) provides education and training that develop the skills to work as a licensed sleep technologist. These professionals are responsible for administering sleep tests to patients, as well as providing patient care and education at a sleep facility such as Marshall Sleep Disorders Center.

The program provides an excellent professional career opportunity for those with a high school diploma or GED, as well as others interested in a healthcare career. During the A-STEP 80-Hour Introductory Course, students learn through both classroom instruction and hands-on clinical training for a well-rounded educational experience.

Following successful completion of the course and its final exam, students will continue their education through Online Self-Study Modules while completing on-the-job training provided by their employer.

Wake up your career as a Sleep Technologist!

Visit mmcenters.com/sleep-academy and fast-track your career by enrolling today.
