CANCER CARE

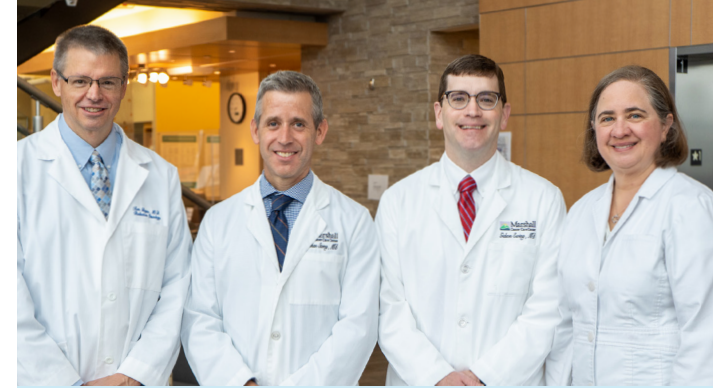

Staying close to home for treatment can put you miles ahead.

The Marshall Cancer Care Center offers the latest oncology treatments for the many cancers that respond to well-established treatment protocols.

We provide the latest, multi-disciplinary techniques for both radiation and medical oncology. Each patient receives a customized treatment plan, delivered with compassion and true caring. In fact, our patients often comment on the caring environment at the Cancer Care Center – they note how much that helps as they face a challenging and life-changing process.

Many factors affect the type of cancer treatment a patient may receive, including the type of the cancer, where it is located, the stage of the disease, and other aspects of the patient's health. Treatment methods range from surgery, radiation therapy and chemotherapy to other alternative therapies that may be appropriate for an individual patient.

Services and Features of the Marshall Cancer Care Center

Radiation Oncology

Includes the newest equipment/technology for the localized treatment of affected cancer cells, including the Varian Linear Accelerator for more accurate treatment and increased patient comfort.

Medical Oncology

Includes comfortable treatment areas where family and friends can support chemotherapy patients during treatment.

Teamwork Concept

A well-rounded team of physicians, technologists and compassionate healthcare providers is a key element of the Cancer Care Center.
